CASE STUDY

0 → 866K

Google clicks in 12 months.

How we built and grew our own website, todayeggrateindia.com, with SEO and no shortcuts.

Swipe →

Find a question people ask every day.

Every morning, thousands of people across India search for one thing:

> “today egg rate in [my city]”

Traders, shop owners and families all need the latest price. So we built a fast website that answers that question better than anyone else.

The goal

Be the #1 answer on Google for every city.

One page for every search.

Instead of one generic page, we built a dedicated page for each city people search for. Each one targets its own keyword.

Fresh content, every single day.

Egg prices change daily, so our pages do too. Live rates keep every page useful, and give people a reason to come back tomorrow.

- Live, up-to-date prices on every city page
- Clear tables people can read in seconds
- A reason to return every day, which builds loyal traffic

Built for Google from day one.

Great content only ranks if Google can read it. So the foundations were built in, not bolted on.

Fast pages

Lightweight code that loads quickly on mobile

Clear titles

A unique title & description for every city

Clean structure

Logical URLs, internal links and a sitemap

Mobile-first

Most visitors search on their phone

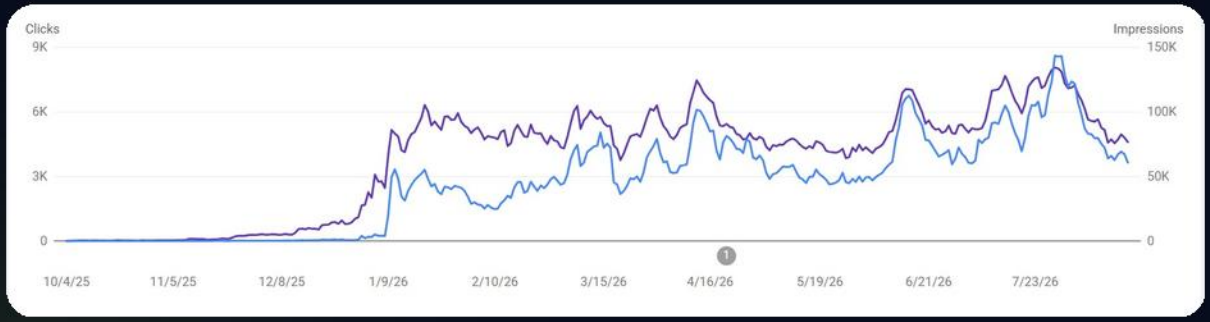

The numbers.

Google Search Console · clicks (blue) & impressions (purple)

We do the same for our clients.

Every website we build gets the same approach: understand what customers search for, build pages that answer it, and make it fast and Google-friendly.

Let's grow your business online
